# Original and Adjusted 2020 Neighborhood Boundaries

Neighborhoods were reconstituted by aggregating 2020 census blocks that fit approximately within the original neighborhood boundaries. Small, unpopulated census blocks along neighborhood boundaries were assigned to one neighborhood to avoid splitting blocks that belonged to the same census tract.

This map is part of the Providence Census Geography Crosswalk, produced through Brown University's Community-Engaged Data and Evaluation Collaborative (CEDEC) by the GeoData@SciLi team at the Brown University Library. Maps created by GIS & Data Assistant Eric Xia. Crosswalk created by Frank Donnelly, Head of Library GIS & Data Services. Data sources: 2023 Census TIGER / Line Shapefiles (vintage 2020 geography), original neighborhood boundaries from the City of Providence GIS Hub, rebuilt using 2020 census blocks by GeoData@SciLi.
